## Introduction

Introduction to the AXIS 3D printer build manual.

Written By: Makertech

# INTRODUCTION

Thank you for purchasing the AXIS 3D printer!

Before starting any assembly we're going to go through the tools you will need and we'll also make sure that you have everything and that nothing from the kit is missing or broken.

## Step 1 — You Will Need

- i** The kit includes a set of allen keys but to complete the build you will also need:
- Scissors, lighter, pliers, phillips head screwdriver, small flat head screw driver and a tape measure.
- !** If you have not ordered the FlexPlate upgrade, you will also need a roll of blue painters/masking tape as a surface to print onto.

## Step 2 — Support

- If you get stuck at any point and need help with the assembly or printing something, feel free to post in the official [forum](#).
- Downloadable resources can be found [here](#).
- If you're missing a part or have received a faulty/broken one, please use this form [here](#) to order a replacement.
- Want to get in touch? Drop us an email at [info@makertech3d.com](mailto:info@makertech3d.com)

## Step 3 — Upgrades and Extra Parts

- Upgrades for the AXIS 3D Printer are available for purchase [here](#).
- Additional components and accessories like nozzles and print surfaces can be found [here](#).
